Part III DETAILED ACTION

Claims 1-22 are currently pending.

Restriction Requirement

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, 17-22, drawn to first NMR method of identifying a binding site, classified in class 324, subclass 307.
- II. Claims 9-15, drawn to second NMR method of identifying a binding site, classified in class 324, subclass 307.
- III. Claim 16, drawn to computer data storage medium.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as patentably distinct methods having different steps (e.g., method of Group I does not require obtaining quantum correlation spectrum required for the method of Group II).

The computer-readable medium of Group III can contain any type of information, other than the obtained by method I. Further, the structure information obtained by method of Group I is non-functional descriptive material which does not bring distinguishing characteristics to the medium of Group III.

Art Unit: 1631

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
